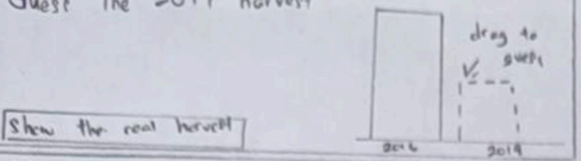
When the rain stops

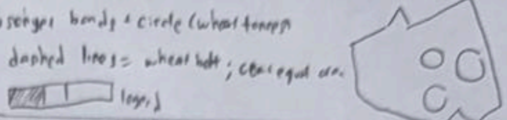
1. Guess the 2019 harvest



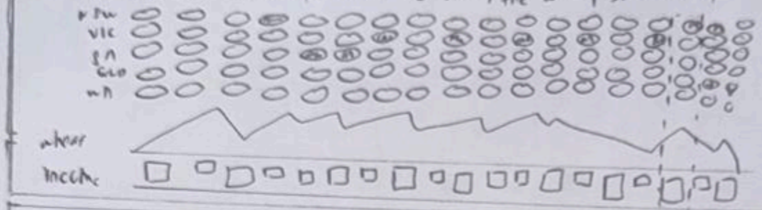
② Only a thin wet crescent can grow grain

isohyet bands + circle (wheat tonnes)

dashed lines = wheat belt; circle equal area



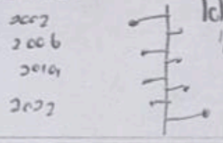
3. 37 seasons, one landscape (click any year; the whole page follows it)



dry to wet, 100% = normal

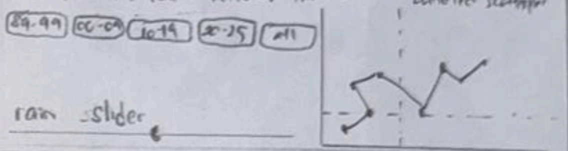
heat map + area + bars + same year ...

4. Farmers still sow, Rain decide yield



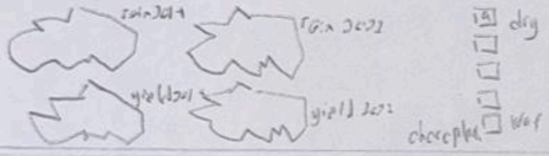
lollipop chart: area vs yield

5. In NSW the harvest follows the rain



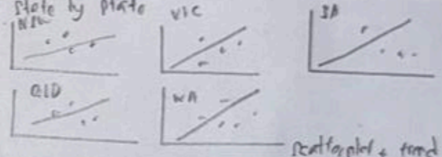
connected scatterplot

6. four maps: 2019 vs 2022



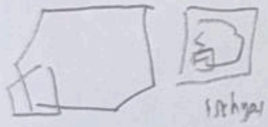
choropleth

7. state by state



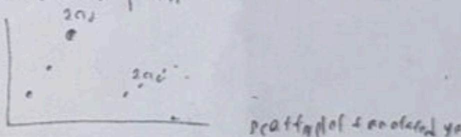
scatterplot + trend line

8 WA: the average is mostly desert



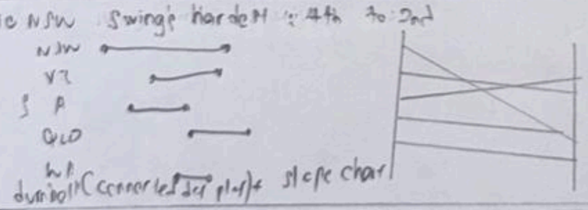
isohyet + inset

9. WA broke the pattern



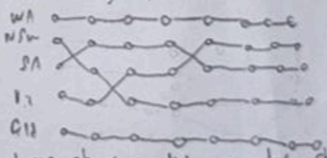
scatterplot + annotated years

10 NSW swings hardest: 4th to 2nd



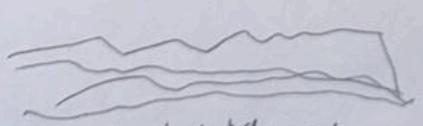
dumbbell (connected dot plot) + slope chart

11. rank every season



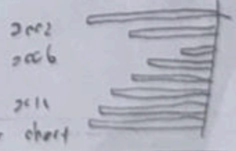
bump chart: click a dot: choose that year

12 the whole paddock rise and fall



streamgraph: wheat, barley, canola

13. How far each crop fell



diverging bar chart

when the rain stops, the harvest stops.

You guessed __Mt. Now you know why it was 14.5
